

DIRECTION FINDER GONIOMETER

ENVIRONMENTAL MONITORING

**A cost-effective way
to extend your research**

CLS goniometer helps users find active ARGOS platforms in the field. Depending on the altitude and the reception conditions the goniometer can detect all transmitting platforms within a radius of 100 km or more.

PERFORMANCE

The CLS goniometer is a very high sensitive direction finder that provides the direction as well as an indication of the distance of an Argos transmitter for field recovery.

This powerful local Argos receiver is able to locate an Argos transmitter thanks to a set of: RXG-134 (direction finder) and AXG 134-A (antenna).

Argos demodulated messages and PTT reception angle are displayed on the screen and available on serial port. An embedded GPS provides local positioning information.

The AXG 134-A antenna is composed by low noise amplifiers and discrete SAW (Surface Acoustic Wavefilter) band filters.

The CLS goniometer is delivered as a complete kit including following elements:

- The GONIO RXG134
- A USB cable
- A specific charger
- An AXG134-A antenna with a 5-m cable

The set comes in an IP66 suitcase with preformed foam.
